Hospital Analytics: Key Business Insights (2023 to 2025)

Revenue is concentrated in a few departments and procedures

- Orthopedics, Cardiology, Emergency and Oncology bring 64% of the ₹130 crore revenue.
- Surgery is 78% of treatment revenue, and five procedures (knee and hip replacement, pacemaker, angioplasty, kidney transplant) make up 44%.
- **Action:** Protect specialist capacity, equipment and implant supply in these areas.

The busiest departments earn the least per visit

- General Medicine has the most patients (1,866) but only 3.5% of revenue (about ₹14,750 per visit against ₹133,000 in Orthopedics).
- **Action:** Track referrals into specialties, and protect these departments as the front door.

Long waits are hurting patient satisfaction

- Rating is 4.31 when the wait is 15 minutes or less and 3.07 above 60 minutes. Recommend rate drops from 94% to 56%.
- Emergency (3.47) and General Medicine (3.50) have the lowest ratings and the longest waits (35 to 36 minutes).
- **Action:** Set a 30-minute waiting target, and fix triage and peak-hour staffing.

Some busy doctors have weak ratings

- Five high-volume doctors score below 3.6 (for example DOC061 at 2.96 with 224 visits).
- **Action:** Rebalance workload, and offer coaching and shadowing from top-rated peers.

One in six appointments is lost

- 15.3% of appointments (3,370) are cancelled or missed, and follow-ups are worst at 20.4%.
- Pulmonology (19.0%) and Ob/Gyn (18.4%) lose the most.
- **Action:** Send reminders 24 hours before follow-ups, and test limited overbooking.

Uninsured patients drive unpaid balances

- ₹5.3 crore (4.1%) is outstanding. That is 8.5% of billed amount for uninsured patients against 1.9% for insured.
- **Action:** Take advance deposits at admission, and offer instalment plans for large bills.

A small group of patients drives revenue

- The top 10% of patients bring 45.9% of revenue, and 72% of patients return (4.0 visits on average).
- Patients aged 60+ are 24% of patients but 38% of revenue.
- **Action:** Run a loyalty and care-coordination programme for high-value, chronic and senior patients.

Capacity is unevenly used

- Ob/Gyn has 14 of 120 doctors but only 3% of visits, and 3.3% bed occupancy.
- Oncology stays average 8.0 days against 4.9 for the hospital, and ICU stays average 5.9 days.
